

SECURITY AUDIT REPORT

Project: QA Project

Scan ID: not available

Scanned: not available

Generated: 2026-07-31T06:33:31.658Z

Executive summary

Risk: CRITICAL | Security score: 9 / 100

Maximum CVSS: 9.1 / 10.0

Critical: 1 | High: 0 | Medium: 0 | Low: 0 | Total: 1

Engine: lunar-client-sast + AI remediation

How to use this remediation report

Process findings in severity order. For every item, confirm source, sink, inherited middleware and runtime reachability before changing code. Apply the smallest safe fix, run the listed validation steps, then rescan before marking the item verified.

Triage status is preserved. NEEDS_REVIEW is not proof of exploitability. Secret-like values are redacted in this portable file.

Prioritized remediation index

1. [CRITICAL] server/config.js:12 - Hardcoded credential

Detailed findings and fix playbooks

001. [CRITICAL] LUNAR-001 / CWE-798 - Hardcoded credential

Location: server/config.js:12 | CVSS: 9.1 | Triage: TRUE_POSITIVE | Confidence: UNSPECIFIED

Why this finding exists: The credential is embedded in executable configuration.

Root cause: Credential duoc nhung truc tiep trong source/deployment thay vi secret store va quy trinh rotation.

Evidence: const password = "[REDACTED]";

Impact: Neu exploit path duoc xac nhan, CWE-798 co the anh huong tinh bi mat, toan ven hoac san sang cua he thong.

Fix strategy: Loai bo source-to-sink path khong an toan, ap dung validation/authorization o server va giu thay doi o pham vi toi thieu.

Implementation steps:

1. Xac minh source, sink, middleware ke thua va dieu kien de exploit path co the chay.
2. Loai bo source-to-sink path khong an toan, ap dung validation/authorization o server va giu thay doi o pham vi toi thieu.
3. Bo sung regression test truoc khi danh dau patch la verified.

Before: const password = "[REDACTED]";

Patch status: unavailable - Khong co ban va da duoc xac thuc.

Validation checklist:

1. Start without the secret and confirm fail-closed behavior.
